PRO™ Chain Rebar/Positioning Lanyard

Our PRO™ positioning lanyards provide high quality compliance at an economical price and are trusted by workers. These lanyards are designed without shock absorbers, making them ideal for positioning or restraint applications. The web, rope and chain positioning lanyards are as tough as the guys who use them and feature abrasion resistant construction and high strength materials. In addition, PRO™ lanyards are lightweight and provide added comfort and safety. Various styles, lengths and hooks options are available to suit your specific jobsite needs.

22 in. (56cm) chain rebar assembly

Ideal length allowing user to directly attach to the structure, leaving their hands free to perform tasks.

Ideal for work positioning

Lanyards without shock absorbers are designed for restraint applications where there is no vertical free fall possible, or for work positioning where the maximum fall is limited to 2 ft. (0.6m) or less.

Extremely durable twist link chain construction

Rugged construction endures rough use, standing up to long periods of outdoor elements for added longevity.

Self-locking steel rebar hook at center

Automatically locks and closes for added safety, and its 2-1/2" (62.5mm) large gate opening fits over larger anchorage structures.

User friendly self locking snap hooks at leg ends

Automatically locks and closes for added safety, and a high strength corrosion resistant construction is built to last.
